

Abstract

This invention relates to a structure of the lampshade, mainly comprising an upper ring, a lower ring, a shade, two retaining rings and a support sheet. It is so designed that the L shape retaining rings will be stuck the upper ring and
5 lower ring respectively to form an adequate gap for receiving the support sheet. The support sheet will be inserted into the said gap become a cylindrical hollow and adhered together at the both ends by a piece of two sides adhesive tape so as to constitute a complete lampshade. This improved structure renders easy and quick assembly and disassembly, saving in production cost and time.
